

SECURE

Bennu Secure's advanced security tools protect your customer's data and your business.

Ensure a higher level of security throughout the customer lifecycle with fully customisable features.

- Manage the end-to-end encryption of customer data.
- Enable multi-factor authentication for login, payments and profile updates for enhanced fraud protection.
- Use reCAPTCHA and SMS verification to block automated attacks and potentially suspicious activity.
- Reduce threats to your websites with sophisticated exploit detection and protect against distributed denial-of-service (DDoS) attacks.
- Secure can be combined with other Bennu products or integrated with your existing systems.
